Manhole

Originated in Krieger room A30A sewage flowing out of a cleanout.

Cleanout inside the Law School Building 1st floor.

Overflowed out of a cleanout on the concrete patio

Sewage flowed out of sewer manhole 510, located between the LATC building and the courts to the south near the hot wa

Located underneath the women's restroom (C7-411)

The BV-100 corridor in Vivarium.

Single clean out

Bathroom and clean out in hallway near bathroom

Northeast corner of mixed liquor tank

Initially, this overflow erroneously was entered in Terminal Island Collection System, under CIWQS Event ID 742242.

This overflow was entered erroneously under event ID 743063 in Terminal Island Collection System Database.

Spill backed into two apartment units ant the address

Inside building. All sewage was pumped into the sanitary sewer.
Contained to restrooms, hallway and a small amount that entered the courtyard but was contained.
The spill was contained to the concrete surrounding the cleanout and an artificial grass field nearby.

Sewage backed up and pooled around floor drains in men's restroom, women's restroom, and concession stand kitchen. Sewage has come into contact with soil underneath the building. UCLA is currently performing soil testing and water testing.

Water was vacuumed from floor in corridor, extracted from carpet in BV-227, and reintroduced into floor clean outs. All liquid flowed from the clean-out cover in a south westerly direction towards a drainage channel and collected in a catchment Hardscape in the courtyard where it is pooled.

A snake was used to clear the blockage in the men's bathroom but was unsuccessful. Pipe tech (vendor) was able to clear concrete ditch and debris basin.

Treatment plant and access road

The entire backup amount entered an adjacent City of Los Angeles catch basin, which is tributary to the Los Angeles River. The crew was able to establish containment and subsequently they returned the entire back up amount to the sewer system. The entire back up amount was contained within the property and was returned back to the sewer system. The crew was able to establish containment and subsequently they returned the entire back up amount to the sewer system. The crew was able to establish containment and subsequently they returned the entire back up amount to the sewer system. The entire back up amount soaked into the ground. The crew was able to establish containment and subsequently they returned the entire back up amount to the sewer system. The crew was able to establish containment and the entire backup amount was returned to the sewer system. The crew was able to establish containment and subsequently they returned the entire back up amount to the sewer system. The crew was able to establish containment and subsequently they returned the entire back up amount to the sewer system. The crew was able to establish containment and subsequently they returned the entire back up amount to the sewer system. The crew was able to establish containment and subsequently they returned the entire back up amount to the sewer system. The entire back up amount soaked into the carpet. A private cleaning company removed all the spill amount and returned it. The entire back up amount soaked into the ground. The entire back up amount entered an adjacent City of Los Angeles catch basin, which is tributary to the Compton Creek. The crew was able to establish containment and subsequently they returned the entire back up amount to the sewer system. The crew was able to establish containment and subsequently they returned the entire back up amount to the sewer system.

Ground and grass area in the back yard of 470 West Palm Street
The water from lateral cleanout overflowed onto the lawn at the residence located at 244 E. Pentagon Street. No solids present in Walnut Creek Channel
Overflowing from Manhole 25 and dried up in the street.

Unnamed terrain

Overflow absorbed into the grass of residence located at 20002 Emerald Meadow Drive.
Spill entered storm drain system that eventually outlets into the LA River.

Rubio Wash Channel

On arrival, water was taken out of service to prevent further overflow of sewer. Had to run cable several times to remove

On arrival, bathrooms were taken out of service to prevent further overflow of sewer. Storm drain was blocked off, the building water was immediately turned off to prevent any further overflow, and upstream bathrooms were closed. Sewer Campus plumbers responded immediately to clear the stoppage. Custodians and concession stand employees cleaned area. UCLA Facilities Management and Capital Programs continue to investigate the scope of the plumbing failure by: 1. Perform The sump pumps were fixed onsite and the sewage was entered back into the sewer system after the building floor was closed

Vacuumed up effluent from floors. Cleaned and sanitized all impacted areas. Any flooded areas requiring demolition or

Manually started pumps,Used Vactor truck to recover 1500 gallons of wastewater from debris basin

The initial crew arrived at 10:10 A.M. and discovered a blockage in an 8-inch diameter mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 5:30 P.M. and discovered a 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 1:16 P.M. and discovered an 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 2:40 P.M. and discovered a 10-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 10:28 A.M. and discovered an 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 2:10 P.M., and discovered an 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 6:23 P.M. and discovered an 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 12:38 P.M. and discovered an 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 7:05 P.M. and discovered an 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 12:39 A.M. and discovered an 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 8:50 PM and discovered a 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 9:50 A.M. and discovered a 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 11:20A.M. and discovered an 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 11:15 A.M. and discovered a 10-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 10:30 P.M. and discovered an 10-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 4:35 P.M. and discovered a 8-inch mainline sewer serving the referenced area backed up due to a root stoppage. The initial crew arrived at 2:14 P.M. and discovered an 8-inch mainline sewer serving the referenced area backed up due to a root stoppage.

We rodded mainline on Palm St. and broke down a heavy root stoppage. Inspected area around cleanout and found no spill. We rodded the mainline south of Pentagon St. and broke down a heavy root stoppage. Swept all standing water back into the system. We rodded the mainline sewer to relieve root stoppage and vacuumed up remaining spill.

We rodded the mainline and broke down a root stoppage.

We dammed the area around the manhole with absorbent sock and rodded the mainline to relieve root stoppage. Vacuumed and returned remaining sewage into the system.

We dammed overflow with absorbent socks and rodded mainline to relieve stoppage. Vacuumed and returned remaining sewage into the system.

We Hydroed the mainline and broke down the root stoppage.

The crew contained the spill with vactor truck . Swept and cleaned the debris back into the manhole. The crew hydroed area around the manhole. The crew vacuumed and returned the spill back into the system. The crew also rodded the mainline and broke down root stoppage. Dammed to contain overflow and returned spill to the system. Hydroed the mainline and broke down a heavy grease stoppage.

UCLA has received water quality results for the groundwater well servicing the co-generation plant which is an industrial p

Emptied approximately 8 wet vacs of which were 55 gallons each.

process (Results attached). UCLA has agreed in cooperation with the Los Angeles County Department of Public Health to

Vacuum volume prior to disposal. View and sampling of excavation and oil beneath the foundation. See attached report
Observation of flow rate over the first half hour of spill.

Circular estimate L' x W' x D' x 0.785 conversion factor to gallons

L' x W' x D' x Conversion Factor 20x12x0.25x0.785

Number of evacuated 25 gallon wet vacuum buckets. 2 buckets x 25 gallons x 80 trips.

3 x 55 gallon drums = 165 gallons + material residual in carpet that was removed.

Dominguez Channel

Arroyo Seco Spreading Grounds above Devils Gate Dam in Pasadena.

dirt channel

Absorbed into the ground at Manhole 138

Entered CDR 233039 to PD 265 outletting into a natural drainage course where it seeped into the ground.

Entered TG 599 to PD 176 outletting into a natural drainage course where it seeped into the ground.

Spill entered storm drain flowing to PD 709 outletting to a spreading ground at Peck Road County Park.

Spill ponded above the manhole and absorbed into a surrounding grass area.

Spill flowed down street and entered Manhole 352. Much of spill had evaporated upon arrival.

Leached into soil in the backyard of residence located at 112 W. Laurel Drive

Spill entered Vermont Avenue Drain into Compton Creek, which leads to the Los Angeles River.

Overflow drained into a parking lot drain behind an apartment complex. This drain appears to connect to the Wilmington

Overflowing from plumbing fixtures inside residence located at 1116 S. Ninth Avenue.

Storm Drain outletting into Compton Creek

Spill entered the storm drain to MTD 493 outletting into Compton Creek, which eventually leads to the Los Angeles River.

Spill entered storm drain flowing to Hooper Avenue drain to Compton Creek, eventually outletting into the Los Angeles Ri

Spill ponded around Manhole 410.

Spill entered storm drain to RDD 007 into Compton Creek outletting into the Los Angeles River.

Spill flowed from Manhole 742 onto the surrounding soil and pavement.

Spill entered storm drain 544 flowing into Rubio Wash, outletting into the Rio Hondo Channel.

Spill entered drain 531, which outlets into Coyote Creek North Fork into the San Gabriel River.

Spill leached into surrounding dirt and grass area.

Drainage system appears to outlet to LA River north of the 10 freeway.

Spill entered storm drain at 1917 Sinaloa Avenue flowing to the Rubio Wash to the Rio Hondo Channel, which eventually

Spill entered storm drain East of Manhole 284 flowing to RDD 75 to the Arroyo Seco Channel, which eventually leads to

Spill was contained in the basement area. Did not reach a storm drain or flood channel.

Exposed pipe in the backyard of residence located at 1616 Morada Place.

Overflowed from Manhole 100 onto surrounding soil.

Spill entered storm drain which leads to the Los Angeles River.

Spill entered storm drain to PD 1508, which eventually leads to San Jose Creek.

Spill entered storm drain to PD 1521, which eventually leads to San Jose Creek.

Spill entered storm drain flowing to the City Terrace Drainage System, which leads to the Los Angeles River.

Spill reached the gutter where it evaporated.

Spill entered storm drain on the Southwest corner of Loch Avon Drive and Norwalk Boulevard, which flows to the San Ga

Much of the spill absorbed into the ground. Remaining effluent was dammed around Manhole 566 and returned to the sev

Spill entered catch basin on the Northwest corner of Pioneer Blvd. and Orange Drive, which flows to the San Gabriel Rive

Spill flowed into storm drain located at 6122 Kings Road, which flows to the Centinela Channel to Ballona Creek.

Spill entered storm drain on the Southeast corner of Vermont Avenue and 214th Street, which leads to the Dominguez Ch

Spill entered storm drain on the Southeast corner of Record Avenue and Floral Drive, which flows to RDD 295 to the Los

Spill entered storm drain located at 6123 La Brea Avenue and did not appear to reach surface water.

Spill flowed onto the curb located on the West side of Kellogg Court where it evaporated approximately 100 feet from the

Spill entered storm drain at the Northeast corner of Montana St. and Lincoln Ave., which flows to the Arroyo Seco Chann

Spill entered storm drain located at 6819 Broadway Drive to Coyote Creek, which flows to the Los Angeles River.

Cleanout in parking garage

Spill entered storm drain on the eastside of Fullerton Road, which flows to PD 1570 outletting into natural terrain.

Residence located at 122 Eserverri Lane.

Spilled onto the pavement around Manhole 626.

Spill absorbed into the soil around Manhole 166.

Spill seeped into the ground around cleanout location.

Spill entered PD 532 to Coyote Creek, which leads to the Los Angeles River.

Spill absorbed into the ground around cleanout located in backyard of residence located at 1512 Braeburn Road.

Spill entered storm drain located on the Northeast corner of 124th Street and Western Avenue, which leads to Domingue:

Spill flowed from plumbing fixtures in residence located at 2071 Maiden Lane.

Spill leached into the ground around cleanout.

Spill flowed from residential cleanout and absorbed into the ground.

Main

Main

[illegible]

We rodded mainline to relieve stoppage and returned remaining sewage into the system.

Crews dammed and returned the spill to the mainline. We also rodded the mainline to breakdown a stoppage caused by root. Spill went into a dirt channel where it was dammed and vacuumed.

We rodded the mainline and broke down a grease stoppage. Cleaned-up and washed down the area affected by the spill. We contained the spill with absorbent socks and returned remaining sewage back to the system. Hydroed the mainline and returned flow. We used hydro pressure equipment to break down a grease stoppage in the mainline. We contained the spill with absorbent socks. Sewage overflowing from MH 16 and backed up into residence located at 253 Pamela Road. Hand rodded the mainline and returned flow. We rodded the private line and broke down a heavy rag blockage. Spill debris was contained and returned to the sewer system. Upon arrival, we observed signs of an overflow. Pushed hand rods, broke down a root and grease blockage in the mainline. Rodded the mainline on Laurel Drive and broke down a heavy root stoppage. Spill leached into soil in the backyard of residence. Hydro pressure equipment was used to break down a heavy grease blockage in the mainline. Contained with absorbent socks. Hydro pressure equipment was used to break down a grease blockage in the mainline. Contained with absorbent socks, returned flow.

We hydroed the mainline to break down grease stoppage.

Rodder equipment was used to break down a grease and grinds blockage in the mainline. Contained with absorbent socks. Hydro pressure equipment was used to break down a grease blockage in the mainline. Restored flow and cleaned-up spill area. Rodded the mainline and broke down a root stoppage. Restored flow and cleaned-up spill area.

Used Rodder equipment to break down a stoppage in the mainline. Restored flow, vacuumed and cleaned-up spill area.

Used hand rods to break down a blockage in the mainline. Restored flow, but unable to contain. Spill leached into the ground. Contained the spill using absorbent socks. Rodder equipment was used to break down a root blockage in the mainline. Restored flow. Spill was contained with absorbent socks. Rodder equipment was used to alleviate a root intrusion and restore the flow in the mainline. Spill flowed from Manhole 556 onto a surrounding dirt and grass area. Contained using absorbent socks. Remaining effluent returned to the mainline.

Attempted containment, with a dirt dam, at storm drain located at 1917 Sinaloa Avenue. Rodder equipment was used to break down a blockage in the mainline. Attempted to contain with absorbent socks. Rodder and Hydro pressure equipment were used to break down a mainline blockage. Hydro pressure equipment was used to break down a mainline blockage and to restore flow. Spill was fully contained within the mainline. Hydro pressure equipment was used to break down a mainline blockage and to restore flow. Spill was contained within the mainline. Contained using absorbent socks. Hydro pressure equipment was used to break down a mainline blockage and to restore flow.

Hand rods and hydro pressure equipment, approximately 10,050 gallons of water, was used to break down a blockage in the mainline.

Unable to contain due to spill location in a right-of-way. Spill absorbed into the ground around Manhole 566 and remaining effluent returned to the mainline.

Removed plastic lateral lining from manhole, which was the source of the mainline blockage.

Rodder equipment was used to break down a mainline root intrusion and restore flow. Washed down curbside and returned flow.

Spill discharged into parking garage and flowed back into the cleanout in the parking garage, where it returned to the sewer system.

Rodder and Hydro pressure equipment was used to break down a mainline stoppage. Sewage collected under residence and returned to the mainline.

Rodder equipment was used to break down a mainline root intrusion and restore flow. No solids present.

Hydro Vactor equipment was used to vacuum remaining effluent.

Spill was fully contained in the basement within the residence located at 2071 Maiden Lane. Carl Warren and Company Inc. Upon arrival, observed signs of an overflow. It appeared that spill had leached into the ground around the cleanout. Rodded the mainline. Hydro equipment was used to break down a mainline blockage and restore flow. Spill flowed from plumbing fixtures and clogged the mainline.

Roots and Grease

Suspected cause was rags, due to vandalism.

Grease/Debris

Industrial rags and rocks.

Industrial rags and rocks.

Heavy roots and grease.

Heavy roots and grease.

Heavy roots and grease.

Roots and rags.

Heavy roots and grease.

Rocks/Debris

Broken pieces of clay and heavy grimes.

Rocks and paper.

Brick and Grease

Brick and Grease

Heavy roots and grease stoppage.

Debris and grinds.

Contractor negligence (asphalt, debris)

Roots and Rags

Accumulated roots and rags in the siphon, possibly caused by the stoppage from the previous night (Work Order No. 400)

Roots intrusion and Grease deposition.

ED 006495 00001080-12264

We rodded the mainline and broke down a heavy root stoppage. Mainline was left down and running normal. Spill ponded in the gutter and was fully contained. We used hydro pressure equipment to break down a heavy grease stoppage. Spill was fully contained, vacuumed, and returned to the sewer system. Majority of spill ponded in parking structure and flowed back into cleanout once mainline blockage was relieved.

Upon arrival, observed signs of an overflow. It appeared that the majority of spill ponded in parking garage and flowed back into the mainline.

Absorbent socks were placed around storm drain and solids were swept back into the manhole. Hydro and Rodder equipment was used to break down grease stoppage. Sand bags were used to direct flow back into mainline at manhole #22. Pump detected nose was shut down and relieved. Building Maintenance had placed absorbent socks around their other drains and clean up was done by them. Sewer Maintenance Crew continued to maintain pump to bypass break and monitor pump. Sewage was contained inside building.

The original call was a sewer backup not an overflow, upon arrival found manhole (33) on Crescent Heights up but not overflowing. Hydro equipment was used to break down grease stoppage in mainline and restored flow. The owner of the restaurant located at 947 Genesee Ave, spill flowed through yard and into street and storm drain, at No. 33.

Release sewage back into floor drains. Carl Warren & Company service performed clean up. Upon arrival found Manhole No. 90 up but not overflowing. Carl Warren & Company's assistance performed clean up. Hydro equipment was used to break down a heavy grease stoppage in the mainline. Complainant already had Restoration performed. Hydro equipment was used to break down a heavy grease stoppage in the mainline. Complainant already had Restoration performed.

Hydro equipment was used to break down mainline blockage. Upon arrival City of Beverly Hills had broke down stoppage and sewage was contained by LA County Flood Control. We used Hydro equipment to break down a heavy grease stoppage in the mainline. City of West Hollywood performed clean-up.

Upon arrival, the crew hydroed from MH 15 to MH 14 to break down grease stoppage. Contained the spill with sand bags.

Plumbing trouble was relieved. Removed rocks and grinds from Manhole No. 15, and washed Manholes Nos. 18, 17, 16.

Spill was absorbed and contained by ground south of Viewridge Rd. along the Southeast side of Topanga Canyon Blvd. V Complainant had declined the offer of Carl Warren and Company's service to perform cleanup. Per the complainant he v Upon arrival manhole was not overflowing but showed light signs of an overflow around manhole 58. The broken force main was replaced by an emergency contractor. Sewage hauled with tanker truck from Davids Road Pump Station to the discharge manhole.

We used absorbent sock around the manhole to contain the flow and returned remaining sewage back to the system. We used

Under ground parking garage floor.

Parking lot area

Parking lot drain

Spill entered storm drain west of The Old Road flowing to a private drain, outletting into a natural drainage course.

Spill overflowed from manhole (127) and earth down the hill.

Mint Canyon Channel per Los Angeles County Flood Maintenance Division.

Approximately 2 gallons of spill escaped into a nearby parking lot or caught in the absorbent socks.

Spill overflowed from Manhole No. 19 into a ditch on the side of the road.

Spill overflowed from Manhole No. 285 into Flood Control catch basin, which leads to Private Drain 2139/Santa Clara Riv

Spill dried up on the asphalt.

1600 gallons ponded in tall brush, 800 gallons ran down dirt path to ocean.

No recommendation. Stoppage was caused by contractor dropping asphalt into the manhole.

Shut off station, by passed station, cleaned up, repaired

Repaired broken air vac fitting.

Any industrial dischargers found to have contributed to the grease blockage will be held accountable. The Sanitation District mobilized the contractor on December 20, 2010 at approximately 12 a.m. to expedite completion of the repair. The Sanitation District mobilized the contractor on December 20, 2010 at approximately 12 a.m. to expedite completion of the repair. The owner of the property will be directed to install a backflow prevention device on its lateral and to remove the illegal yard. The Sanitation Districts will repair force main and evaluate the possibility to conduct more detailed inspections of the force main.

The Sanitation Districts will re-train responsible individual and pursue appropriate disciplinary action.

The Sanitation Districts bolted the pressure plate of MH B1035 cover, which had been unbolted. All pressure covers on the system. The Sanitation Districts are evaluating potential means of stabilizing the area where the sewer pipe was repaired.

#NAME?

Re-secured manhole cover with locking bolts and metal strap.

Replaced Section of Force Main

A more detailed inspection of the discharge manhole will be required when setting up an above ground bypass.

An overflow bypass line will be constructed between manholes 558 and 557. The bypass line will provide an alternate route for flow.

An overflow bypass line will be constructed between Manholes 558 and 557. The bypass line will provide an alternate route for flow.

None available

Investigation is ongoing to determine if the apartment complex has an unpermitted connection of a floor drain to the Inglewood

Business/commercial building

Parking lot located at the southwest corner of the intersection of Narbonne Avenue and Pacific Coast Highway

Intersection of N. La Brea Ave. and Hyde Park Blvd.

At the intersection of East Newton Street and Vista Montana

Intersection of W 92nd St and South Grand Ave

Just south of the intersection of 119th Street and Van Ness Avenue

South of Pacific Coast Highway on Narbonne Avenue

Multi-family residential unit at 604 Evergreen Street

Intersection of Hawthorne Blvd and Rolling Hills Road

North Moneta Ave, south of intersection with West 212th Street

Moneta Avenue, south of intersection with West 212th Street

North Moneta Avenue, south of intersection with West 212th Street

Approximately 300 feet north of the intersection of Santa Anita Avenue and Foothill Boulevard

Intersection of Sycamore Avenue and Santa Anita Avenue

Approximately 200 feet north of the intersection of Sycamore Avenue and Santa Anita Avenue

Intersection of Santa Anita Avenue and Hacienda Drive

Rush St, east of intersection with San Gabriel Blvd

Arroyo Drive, between Ironstone Ave and Jerseydale Ave

On Vega Street north of Main Street

Intersection of Hacienda Blvd. and Janine Drive in a residential area

Approximately 26 feet south of the building at 12303 Florence Avenue

South of Whittier Boulevard on Scott Avenue

El Dorado Nature Center Park north of East Willow Street between Coyote Creek and San Gabriel River

Residential basement and backyard

Residential basement

Residential basement

Excavation pit in an unpaved construction site on private property

Intersection of East First Street and Dalton Avenue

Near the intersection of Puente Street and Mesarica Road in the City of Covina.

Northeast corner of intersection of Orange Avenue and Wesley Drive

End of Burnett Street, west of California Ave

Offices of Foasberg Cleaners

South of 28th Street on Signal Parkway

Intersection of Lemon Avenue and East Burnett Street

Parking lot located west of 42nd Street and south of The Strand

Parking lot near 3900 The Strand

Parking lot near 4000 The Strand

Parking lot near 4200 The Strand

27th Street, just east of North Manhattan Avenue

Clean out in road at the corner of Ventura Avenue and Island View Avenue.

Intersection of Chico Ct. and Highland Dr. and Santa Rosa Rd. Spilled onto street and concrete storm drain box

Recommended installation of a backflow prevention device.

The Sanitation Districts plan to meet with LADWP and LA Bureau of Sanitation to discuss measures to prevent recurrence. The Sanitation Districts will install a Smart Cover on MH 2328. The Smart Cover will continuously monitor the level of flow. Most recent cleaning was performed in July 2010. Cleaning of this sewer has been removed from contractor and assigned to the owner of the property where the overflow occurred will be required to install a backflow prevention device. Contacted Los Angeles County Department of Public Works to emphasize that root debris be captured during local sewer cleaning. An assessment will be made of the need to increase the capacity of the sewer downstream of the overflow. The Sanitation Districts will reassess the control strategy at an upstream pumping plant. The Sanitation Districts will reassess the control strategy at an upstream pumping plant. A relief sewer is currently in the design phase. Once completed, the hydraulic capacity in the sewer system should be adequate. A relief sewer is currently in the design phase. Once completed, the hydraulic capacity in the sewer system should be adequate. A relief sewer is currently in the design phase. Once completed, the hydraulic capacity in the sewer system should be adequate. A relief sewer is currently in the design phase. Once completed, the hydraulic capacity in the sewer system should be adequate.

The Sanitation Districts inspected all link-pipe sectional liners in the vicinity. One additional link pipe was found to be defective. The Sanitation Districts are reassessing the control strategy procedures for bypass systems operated by contractors. None available.

The Sanitation Districts will remove the flow meter device to prevent future overflows.

The Sanitation Districts have protocol cited in Buildover Agreements that contractors are required to follow when constructing a relief sewer. A relief sewer is currently under construction. Once completed, the hydraulic capacity in the sewer system should be adequate. The Sanitation Districts will meet with representatives of Sancon and if deemed appropriate, the Sanitation Districts' will send a representative to the site.

The Sanitation Districts performed CCTV inspection of all tributary sewers and were unable to determine the source of the overflow. The illegal storm water connection to the sewer will be removed from service. The owner of the property where the overflow occurred will be required to remove the connection.

Identifying source of scale that caused camera to get wedged.

The cleaning frequency will be evaluated to determine if frequency should be increased from annual to semi-annual or quarterly. The Sanitation Districts will pursue monetary compensation from Colich & Sons for the costs associated with overflow response.

Mainline will be televised to determine if further action is needed.

CCTV Private Laterals to check for rag and sand entry.
Continue routine cleaning of 2yr cycle

No system failure. Overload by a one time, unapproved, hook up that introduced too much water into the system. Plug in manhole that backed up and pressurized line slightly and old line then failed inside of a building.

Cracked pipe fittings, due to age of system.

Blockage was approximately 50 to 75 ft up stream from the downstream manhole.

Advised contractor that a pump around plan needs to be in place and that a second pump should have been in place in case of repaired floats

set the cleaning cycle pump float to shut off at the correct level.

Pump #2 electrical failure grounded out system and kicked off main PG&E breaker.
Pump electrical failure grounded out system shutting off PG&E main breaker. Grounding problem corrected.

HYDROED AND UNPLUGGED SEWER LATERAL.

Cleared sewer line of paper and debris. Will put on list to video line.

Hydroed from manhole on Ashe Road south of N. Halfmoon east 30', hit and cleared main line. Broke the stoppage in main line. Manhole overflowed due to sewer pump station failure. Cleaned up overflowing manhole and made sure there was no blockage. Hydro from manhole at location and went about 100'. Blockage was caused by debris and grease. Washed down area around manhole. Hydroed main sewer line and washed down overflow area in the street/gutter with bleach to decontaminate.

Hydroed line from manhole on Long Meadow Way/Pine Glen Drive 300' north, hit and cleared stoppage. Washed area down street.

Set up at 2111 Sacramento Street, hydroed west 450' to stoppage. Also washed down street and put bleach at location where stoppage was. Set up on Union Avenue and hydroed north 150' to 200' to stoppage then hydroed west 80 ft. to 100 ft. to stoppage in main line. Reset controller at 19th Street sewer lift station. Also made sure sewer lift station was working and that no other manhole was plugged. Set up at 10 'U' Street and Hydroed north 200 ft. Then set up at 1st and 'U' Street hydroed east 200 ft. Washed down area around manhole. Line plugged with grease. Hydroed main line 100 feet to the east.

Set-up at 23rd and 'F' Street, hydroed north 400 ft. twice. Lot's of grease there, also wash-down and put bleach down. Set up at 3100 Elm Street, hydroed north 250 ft. to the stoppage then 750 ft. south. Washed down area on both sides. A Reset pumps at pump station and routine pump station check.

Ran pumps manually, cleaned transducer, cleaned and sanitized lift station.

Grease and paper in main line.

Also grease.

Control relay failure in the control cabinet for the Fairfax sewer lift station caused the pumps to fail to start.
